INTERNATIONAL JOURNAL OF

Automation Technology

AIMS & SCOPE

The *International Journal of Automation Technology* focuses on advanced automation technologies ranging from basic techniques to a variety of applications meeting industrial requirements. This covers automation technologies on design, manufacturing, assembly, inspection, transportation, logistics, machine tools, robotic system, and control systems and devices. While some journals focus solely on automation specific to scientific research, the *International Journal of Automation Technology* is the only journal that provides broad, comprehensive coverage, from engineering research and development papers to articles found in commercial magazines. This journal thus provides many practical examples relating advanced automation and reviews, research and development papers, news, and interviews, providing readers with much new, interesting, and informative topics directly applicable to their work.
